**Tech Sheet - AquaResin® SEPR-8™ Release Agent**

SEPR-8™ is a petrolatum based sealer-release agent formulated specifically to release Aqua-Resin® casting/laminating products from either plaster or from cured Aqua-Resin® itself. It also maybe used as a release agent for rigid polyester molds.

**Application**

Apply to a plaster or Aqua-Resin® mold, (the mold can be either "green-wet" or dry). Using terrycloth, or a similar fabric, apply the SEPR-8™ working it well into the "grain" of the mold. Then, using a second, clean piece of terry cloth, rub off the SEPR-8™ leaving a thin film.

Repeat the above procedure for a second time. Then proceed as usual, applying the Aqua- Resin® mix to the mold.

Please note: Use no more SEPR-8™ than necessary to achieve a satisfactory release; excess can cause "pocketing" of the gel coat and will decrease release properties.

**The use of a sealer before application of SEPR-8™ is not recommended.**

TIP: Working with rigid molds requires that the cast part have no undercuts. Also, extra cure time may be desirable to ensure a stronger part before demolding.

*Please Note: The use of SEPR-8™ with Latex rubber molds is not recommended.*

*Consult MSDS for more information.*
