

SILICONE ART MATERIALS™

The Essential 6 Primary Color System™

vivid silicone-safe pigments
no sulfur no cadmium

3 Warm Primary Colors 3 Cool Primary Colors

Red	●	●	Magenta
Warm Yellow	●	●	Cool Yellow
Blue	●	●	Cyan

Vivid, silicone-safe pigments. No sulfur, no cadmium. Just about any bright primary and secondary color can be 'faked' with these 6 colors. You can mix more colors with the Essential 6 than with CYMK, for sure. All pigments are in the 'top rung' of permanence as far as 'synthetic' colors are concerned. SAM Red has been dubbed "Ferrari Red" due to it's exceptional lightfastness on expensive sports cars.

For designers, art directors, model makers, toy and product prototypes, sculptors, painters, special effects, themed attractions, museums, display, inventors, reborn doll artists, doll makers, mask makers, puppet makers, experimental artists, costumiers, prop makers, theater, television, motion pictures.

Mixing Info: SAM Silicone Colors have been formulated so 1% by weight (1 part color to 100 parts silicone -or- 1 small squirt to 1/2 cup silicone by volume) will give a good representation of that color in translucent silicone. For full color saturation use up to 5%, although 3% will probably be all you will ever need. Use 0.5% or less for translucent effects. For painting use up to 5% mixed into translucent silicone rubber, paint base or adhesive / caulking for general coloration, up to to 10% for intense opaque detail. Thin to proper consistency with appropriate solvent.
